## Control your Assets - SAFFRON ASSET

saffron

ASSET

FDH's Saffron Asset Management Solution enables you to keep track of your organisation's key assets – whether around the office or at remote operational sites. This reduces and replaces paper based systems and manual duplication within your establishment. The Saffron Asset module represents an effective mobile-based asset tracking system, optionally using barcode or RFID technology to verify when and where items are, where they were bought and recording their present condition.

Saffron Asset works with a simple user interface, and has been designed for any mobile and field based application from any industry sector. Saffron Asset uses the latest handheld technology to collect information that may otherwise be collected via numerous types of forms, tables, surveys or maintenance information. The system allows staff to record and receive real-time data in multiple formats as they move around, from different locations and across different asset groups.

The system provides a customisable register of your company assets, such as location, procurement details, fault and maintenance history, current value, depreciation and accurate lifetime cost for each asset. Saffron Asset integrates with industry standard Crystal Reports™ - to give you the crucial information you need to make asset decisions. You can use it almost anywhere, but hospitals, schools, manufacturing sites and offices will particularly benefit in keeping control of computer, machinery and hospital equipment.

It is accurate, consistent and cost-effective – unlike conventional, inefficient and unreliable paper-based asset management systems.

### BENEFITS

#### Simple to use

- no real IT experience needed
- simple drop down menus
- graphical reports and data

#### Real time capture of Asset information for remote and field workers

- saving you valuable administration time and costs
- radically reduces data capture and processing time
- improves the detail and accuracy of asset information
- delivers measurable cost savings from process efficiency
